Foley new and remanufactured PTO clutches

by TCIA STAFF

Foley Engines now offers both new and factory-remanufactured power take-off (PTO) clutches with upgraded severe-duty components, including 100% Kevlar composite discs. These proprietary Kevlar composite linings are designed to have as much as a 300% longer service life, compared to the molded-fiber friction discs commonly used, and to avoid failures caused by broken teeth. The firm specializes in Twin Disc/Rockford and WPT Power clutches.

These clutches, often called “hand clutches,” are often used in wood chippers and tub grinders. Foley’s remanufactured exchange units eliminate the delay and downtime involved in having a PTO clutch rebuilt locally and offer significant savings compared to buying a new unit. The company stocks approximately 200 new and remanufactured PTOs ready for same-day shipment. Foley also can help with obsolete units for which parts are no longer available, with its capability to fabricate new replacement parts.
